Introduction

As professional dentists we offer predictable permanent treatment solutions using dental implants, to replace missing teeth and gaps, restoring your confidence, chewing ability and aesthetics of your teeth.

Experience the latest innovative technology with advanced tooth implant systems from recommended dentists to provide you with healthy and natural looking solutions.

TITANIUM BASED DENTAL IMPLANTS PLANNED FOR LONG TERM SUCCESS

Our dental implants can mimic natural teeth. If you have a single missing tooth, a dental implant can be an excellent solution for restoring your smile. Whether a single tooth is missing or several teeth or you require restoration of your entire mouth, our titanium based implants can be the correct dental care with successful outcomes.

Implants are artificial replacements for missing teeth. Procedure times vary depending upon your specific choice of system from 'implants in a day' to more complex implant surgeries. Alternatives to dental implants include: dental bridges or dentures.

You will be pleased to know that we can make your treatment more affordable with our 0% no interest finance helping you to spread the cost.

Am I suitable for implants? At your free initial consultation we will assess the feasibility of providing your implant treatment. We want to understand your individual situation and concerns to give you all the correct options. After this we provide you all the information you need to make a decision based on what is best for your dental health.

Step by step Implant treatment Explained

This surgical treatment can be undertaken in a single day or in some scenarios, it may take three months (for implants placed in the lower jaw) or up to six months (for implants placed in the upper jaw) to complete your treatment, from start to finish. However, this may vary depending on the specific case and includes considerations such as: the type of treatment being considered; the width and height of available bone; gum and oral health; the healing time required after the removal of the tooth in the area; the quality of bone; the possible presence of infection or if the bone present is deficient and a bone graft is required.

Our implants are artificial roots made of titanium that integrate to your bone, allowing us to attach a natural looking replacement tooth or teeth. See 'Before and after photographs.' They provide a long-term solution to restore your confidence in eating, function and appearance as they are fixed in the mouth and thus behave and act like natural healthy teeth. The treatment forms one of the methods we can use to create smiles in a day. There are a variety of options available in how we can replace missing teeth with a range of affordable costs and prices. You can discuss your suitability and choice of options with our dentists dedicated to Implantology.

Fixed & Fast

Implants in a day

At the Perfect Smile Studios we assign our success in implant dentistry to the fact that we have been very conscientious to only recommend dentistry which is viable, stable and has the most optimum outcome. It is our objective to give you aesthetic-looking teeth and gums that have a long predictable durability, as well as choice of options that match your needs and requirements.

Hence, the latest innovation in dental implant systems has revolutionised the way we can now care for those patients that have missing, loose or badly broken down non-functional teeth. The system is called “Implants in a Day”. As the name implies it has some major advantages over the traditional teeth implant techniques and we are confident of its place in Implant Dentistry and thus provide this treatment.

THE BENEFITS OF FAST & FIXED INCLUDE

- It is fast so no long waiting for healing time or bone integration
- It is also a permanent fixed treatment so great for those with loose dentures or those that never want to have dentures
- It is more affordable than traditional systems
- There is no lengthy treatment time
- Minimal appointments are needed unlike the traditional systems
- Extensive bone augmentation procedures are not required
- Teeth can be made of more affordable materials compared to traditional dental implants where teeth can only be made of porcelains thus increasing its cost. Also, the teeth will not stain for a maximum period of 7 years
- After bad teeth are extracted you no longer have to have a temporary denture – we can immediately fix you with this implant system
- The system can be adapted to suit different budgets hence very affordable
- Extensive detailed clinical trials have proven the effectiveness of this dental implant system as a serious contender

YOUR NEW AFFORDABLE SMILE IN A DAY

The main philosophy behind Fast & Fixed is to combine the products of oral implantology with dental techniques to create a perfect symbiosis. This symbiosis enables our highly experienced implant clinicians to optimise their work and treatment so that they can reduce treatment time and costs correspondingly.

Dental Implant Solutions

For missing teeth

As dentists we recommend implants as the most common long-term solution available, with extremely good results and can be designed to cosmetically match the original tooth colour and that of neighbouring teeth. [Click here for a quote on your dental implants](#)

SINGLE MISSING TOOTH - A single Implant would be recommended by our aesthetic dentists as a replacement where a tooth is missing or if a tooth needs to be extracted.

MULTIPLE MISSING TEETH TREATMENTS - Implants can be used to replace multiple lost teeth. You can use the implants to support crowns, bridges or cosmetically enhanced dentures.

IMPLANTS IN A DAY - The latest innovation in our clinics implant systems has revolutionised the way we can now care for those patients that have missing, loose or badly broken down teeth with Fast & Fixed Options. These implants give the confidence to smile or eat without the need for lengthy treatments of multiple dental visits.

DENTURE STABILISATION SOLUTIONS - Denture Stabilisation Implants can be used to fix loose dentures. Implant supported dentures eradicate the problems of dentures gradually becoming loose or painful.

“ALL ON 4” IMPLANTS – We can support multiple artificial teeth on four implants. This is a useful option when many teeth are missing and prevents placement of multiple implants. This forms part of our range of options available to you to restore your mouth back to its original state without the need for removable dentures. Dental implant-supported bridges form a great natural looking aesthetic option to allow you to replace your missing teeth.

About Us

We want our patients to experience the peace of mind that they are in safe hands and in total control of the solutions available to them.

Our team of highly skilled cosmetic dentists, trusted specialists and dedicated friendly and knowledgeable team of care nurses, pride ourselves on the results that we are able to achieve by exceeding expectations and changing the lives of our patients for the better.

We are committed to providing customised cosmetic dentistry treatments in a relaxing and comfortable environment. We want to help restore that perfect smile for our valued patients using the breadth of experience, skill and knowledge that we are forever accumulating for your care and attention.

As a result we want to change the lives of our patients not only by transforming their smiles, but a change in the health of their mouth, structure of their teeth and thus their confidence. Our team will also endeavour to exceed your expectations in everything that we do.
